

# Rotary plough

In terraced farming, the rotary plough is your indispensable companion. It allows for quick and easy processing of terraces and headlands.

3,675 mm

## Technical data

|                                            |                          |
|--------------------------------------------|--------------------------|
| Width                                      | 800 mm                   |
| Side shift with oscillating hitch frame    | ± 150 mm                 |
| Inclination with oscillating hitch frame   | ± 15°                    |
| Required hydraulics                        | 40 l/min at 200 bar      |
| Necessary hydraulics for cylinder movement | min. 10 l/min at 130 bar |
| Rotational direction                       | Left & right             |
| Weight                                     | 165 kg                   |
